### Sources of Reliable Information

1. National Institute of Statistics or Instituto Brasileiro de Geografia e Estatística (IBGE, n.d.): IBGE is a public institution responsible for collecting, processing, and providing official data on the Brazilian population. Its information is reliable and can be used to analyze the country's economic, social, environmental, and demographic situation to support decision-making and planning at all levels of government. The institution provides data on topics such as population censuses, labor force surveys, national accounts, and the environment.

2. National Agency for Telecommunications or Agência Nacional de Telecomunicações (ANATEL): ANATEL is responsible for regulating the telecommunications services sector in Brazil. It collects and provides information related to licenses, operators, tariff plans, and consumer rights. The agency also publishes regulations on the use of telecommunication services and promotes the dissemination of technology in the country.

3. Central Bank of Brazil or Banco Central do Brasil (BACEN): BCB (2023) is responsible for overseeing and controlling the Brazilian monetary system. It provides reliable financial information related to inflation, interest rates, currencies, and other economic indicators. Additionally, the bank publishes regulations on banking activities such as credit and investments.

4. Ministry of Foreign Affairs or Ministério das Relações Exteriores (ITAMARATY): ITAMARATY is responsible for managing Brazil's international relations and providing information about the country's diplomatic activities (gov.br, n.d.). It publishes news on government statements, events, treaties, and other bilateral agreements with other countries.

5. IMF: The International Monetary Fund (IMF) is an international organization responsible for supervising the global financial system. It provides reliable data and studies on Brazil's main economic indicators, such as GDP, external debts, and current account balances.

6. World Bank: The World Bank is a development institution that provides financial resources and technical assistance to countries to reduce poverty and improve living standards. It collects and provides data on Brazil's economic, social, and environmental situation, such as population growth, poverty rate, and access to basic services.

7. United Nations Development Program (UNDP): The UNDP is responsible for promoting sustainable development worldwide. Its research gathers information about the state of poverty, education, healthcare, and other areas in Brazil. It also provides data on the implementation of policies and programs designed to reduce inequalities and improve people's lives.

The information from the sources identified in this list could be used to support international transactions and businesses in Brazil. For example, the economic data provided by BACEN and the IMF can inform decisions on investments, while ANATEL's regulations guide telecommunications services. Additionally, ITAMARATY's published news can help companies understand the diplomatic relations between Brazil and other countries, while UNDP's research can help them understand their social responsibility in the country. These resources provide reliable and official information that helps inform international transactions and businesses in Brazil.
